Cyber Security Reimagined

Increasing incidents of zero-day exploits can be attributed to the decreasing cost of computing power—giving cybercriminals the resources to launch more, highly sophisticated cyber attacks at lower costs than ever before. With this ever-changing threat landscape traditional security systems are falling short of protecting the enterprise. To safeguard your agency from cyber threats, you must reimagine your cyber defense strategy - from the endpoint to the heart of the network, data center and cloud.

Copper River Technologies is proud to partner with Palo Alto Networks – the leader in next generation security. Copper River Tech provides a team of Palo Alto Networks certified experts that look at your existing security infrastructure, identify any possible security gaps, and then design innovative ways to improve - and further protect - your enterprise while utilizing the Palo Alto Networks® Next-Generation Security Platform – a framework built on cyber threat prevention. This threat prevention methodology changes how enterprises reduce their risk of attack by creating an integrated, automated, and scalable framework that extends past the network perimeter. This shift from threat *detection* to threat *prevention* enables organizations to realize a true, comprehensive cyber security posture.

Flexible Procurement Options

In addition to offering a differentiated approach to security, Copper River Technologies is a Federally Recognized, Alaskan Tribal-Owned, SBA Certified 8(a) Small Business and offers a differentiated approach to procurement for our Federal customers. As defined by the SBA 8(a) program, Alaskan Tribal-Owned companies, like Copper River Tech, are able to provide flexible procurement options in order to create, grow, and sustain their business. These procurement benefits include:

- The right to receive sole-source contracts of any value, which are not subject to the dollar value limitations applicable to other non-Tribally Owned entities (13 CFR 123.124 and 311b)
- Sole-source awards may not be protested (13 CFR 124.517a)
- Sole-source awards may combine multiple vendors' equipment and/or services into an integrated design, build, and maintenance solution within a single procurement

Company Overview

Copper River Technologies, LLC empowers Public Sector and Enterprise organizations to reimagine the possibilities of their IT infrastructure. Our expertise in emerging technologies allows us to design and deliver leading-edge products and services that transform traditional, legacy networks into modern, secure, and resilient IT architectures. As a Federally recognized, Alaskan Tribal-Owned, 8(a) Certified Entity, our clients benefit from our unique, cost-effective procurement advantages which enable timely fulfillment of any IT requirement. Our proven expertise in implementing advanced solutions in Cyber Security, Cloud, Mobility, and Enterprise Architectures is why our clients depend on us to design and deliver innovative, secure, and scalable IT networks.

Company Highlights

- Federally Recognized, Alaskan Tribal-Owned, 8(a) Certified Entity
- Founded in 2016
- Owned by the Native Village of Eyak
- Cage Code: 7REJ7
- DUNS: 080450525

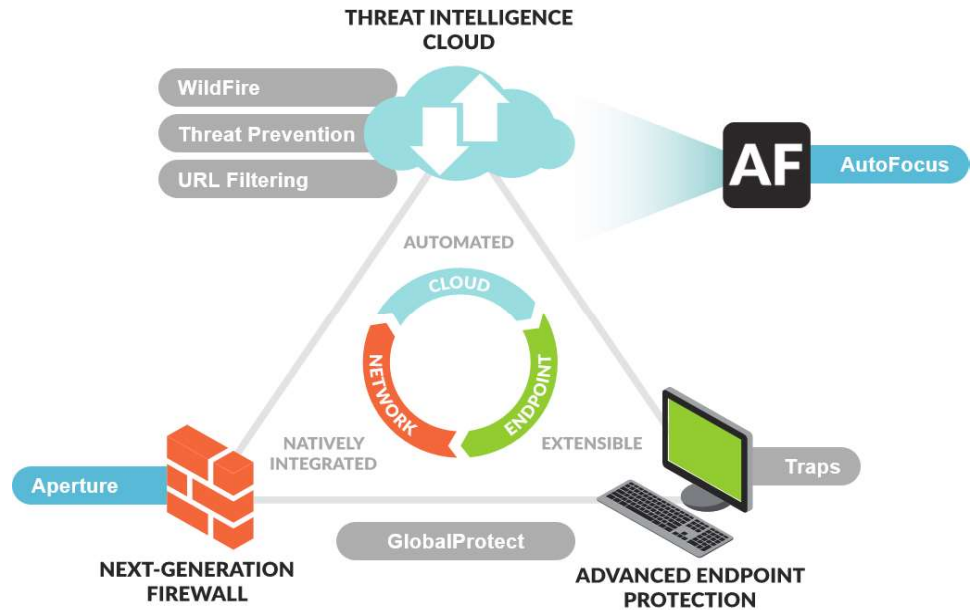

Emerging Technology Solutions

- Cyber Security
- Cloud
- Mobility
- Enterprise Architecture
- Data Center

The Palo Alto Networks Security Platform

Protection. Delivered.

With increasing cloud adoption, volumes of advanced threats and SSL traffic, security teams and CISOs are overwhelmed with the task of improving cloud usage visibility, analyzing data, detecting and responding to threats and inspecting SSL traffic. The widespread use of point products makes this a manual, expensive and people heavy process.

By focusing on prevention, the Palo Alto Networks natively integrated Next-Generation Security Platform enables customers to embrace the cloud and prevent successful cyber attacks with high performance across network, endpoint and cloud environments.

It prevents threats through automated workflows and security with fast and precise protection that is generated and shared globally.
